PROFILE

Cross-functional product and customer experience professional who turns messy business problems into clearer products, workflows, and experiences. Background spans product development, AI-enabled systems, customer research, operations, and commercial growth. Combines hands-on business experience with graduate work in product design and a psychology foundation to understand both how systems work and how people actually use them.

EXPERIENCE

MAGIC SLEEK

Product Specialist & Marketing Coordinator

Manalapan, NJ | May 2025–June 2026

- Worked across product, marketing, customer experience, education, operations, and distributor support, translating business needs into customer-facing experiences and internal systems.
- Contributed to launches and go-to-market work across positioning, packaging, product education, digital content, events, customer communication, and sales enablement.
- Supported distributor development that resulted in a \$56,000 initial order from Paramount Beauty; created materials and product support to move the relationship from opportunity to commercial launch.
- Designed an AI-powered internal knowledge assistant that brought fragmented product, sales, promotion, and operational information into a conversational knowledge environment.
- Built knowledge systems, SOPs, product guides, training resources, and workflows to make information easier for teams to find and use.
- Used customer feedback, business data, and cross-functional input to improve processes and customer-facing experiences; represented the company through education, trade shows, and distributor events.

G & C ROBINS CO. / SUPERCUTS

Branch Manager

East Windsor, NJ | June 2018–July 2021

- Diagnosed an underperforming salon using sales, traffic, staffing, and employee-performance data to identify operational problems and opportunities.
- Increased monthly revenue from approximately \$4,000–\$5,000 to more than \$20,000 within 13 months, a 4×+ increase.
- Increased client retention by 32% through CRM outreach, service follow-up, customer engagement, and improvements to the in-store experience.
- Reworked staffing, training, incentives, scheduling, and daily operations; coached employees around measurable goals and managed inventory and operational standards.
- Combined local outreach, customer feedback, and ongoing performance analysis to test changes and adjust the turnaround strategy.

ADDITIONAL EXPERIENCE

MissTeePRO | Product Design Extern | January–May 2025 Conducted formulation, customer, market, and competitive research for haircare concepts; built a relational Airtable research library to support product opportunities and development decisions.

The Art of Hair | Hairstylist / Cosmetologist | August 2021–January 2024 Built client relationships through personalized consultation and created targeted digital content that increased service bookings by approximately 20%.

SELECTED PRODUCT & AI WORK

VOCARI

AI-Assisted Career Discovery Platform

2026–Present | Product Strategy · AI Systems · Research · Prototyping · Development

ACTIVE DEVELOPMENT

Designed and continue to develop a career exploration product intended to move beyond one-time recommendations toward an evidence-based, user-refinable understanding of the person.

- Conducted user research and iterative testing on how people interpret, challenge, and refine AI-generated career insights.
- Designed Profile DNA, conversational feedback loops, evidence verification, explainability, privacy controls, and user-controlled profile refinement.
- Built a structured 35-career prototype library and systems connecting user evidence to recommendations; developed an evidence architecture separating observed information, interpretation, and user confirmation.
- Continued beyond the original graduate research through prototyping and development with Supabase, GitHub, Vercel, Lovable, and AI-assisted development workflows.

JOOMLA EXTENSION DIRECTORY

Discovery & Information Architecture Redesign

2026 | User Research · Information Architecture · Product Strategy

- Investigated extension discovery through 4 stakeholder interviews, 2 surveys, heuristic evaluation, and competitive research.
- Identified barriers in terminology, search behavior, metadata quality, filtering, comparison, and trust; translated findings into an information architecture and product direction.
- Developed recommendations for semantic discovery, synonym mapping, metadata capture, weighted ranking, filtering, comparison, and contextual “why this result” explanations, without requiring users to know Joomla’s internal terminology.
